December 16th, 2013

**TotalMix FX for iPad® App now available on the App Store**

TotalMix FX for iPad is RME's Windows/Mac software TotalMix FX ported to iOS. It gives control over the mixer and effects of the supported audio interfaces Fireface UCX and Fireface UFX, when these devices are in Class Compliant mode. TotalMix for iPad does not work wirelessly, and is no replacement for typical remote software (like Lemur / TouchOSC).

TotalMix FX for iPad runs on any iPad and all iOS versions from 5.0 up, using only low resources. As under Windows and Mac OS X it does not process audio, but acts as remote control for the calculations performed in the hardware. The app is fully compatible even when storing/loading Workspaces. Except MIDI/OSC remote control it includes all features of the desktop version.

Using the Fireface UCX with the iPad, TotalMix for iPad for the first time unlocks the device's whole functionality, in a quick way, with full overview and lightning fast configuration.

For the Fireface UFX the whole functionality is included as well. Even DUREC (Direct USB Recording) is fully usable and controllable from the iPad.

TotalMix for iPad benefits from the background audio functions in iOS. During ongoing recording and playback switch to TotalMix at any time, perform the desired settings or changes, then return to the audio app, where record/playback had not been interrupted.

The app includes an extensive help. Continuing information on TotalMix FX and the Class Compliant operation of both devices is found in the current manuals. These are available for download at <http://www.rme-audio.de>, section Download.

For more information about the TotalMix FX App please visit the RME forum:
